

# Energy Efficient Fans & Impact On Overall Energy Of Buildings

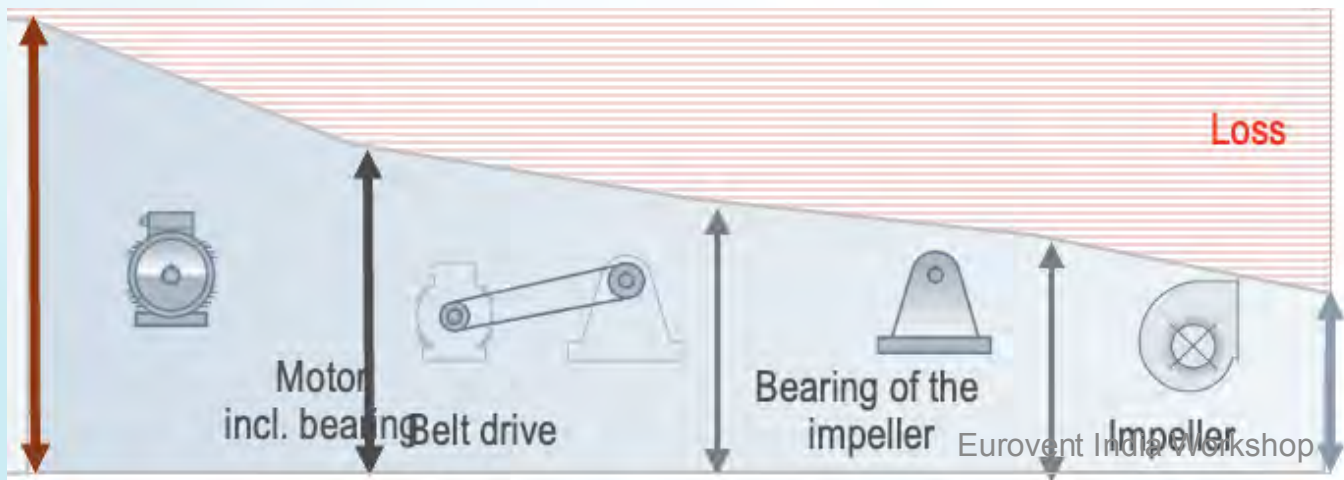

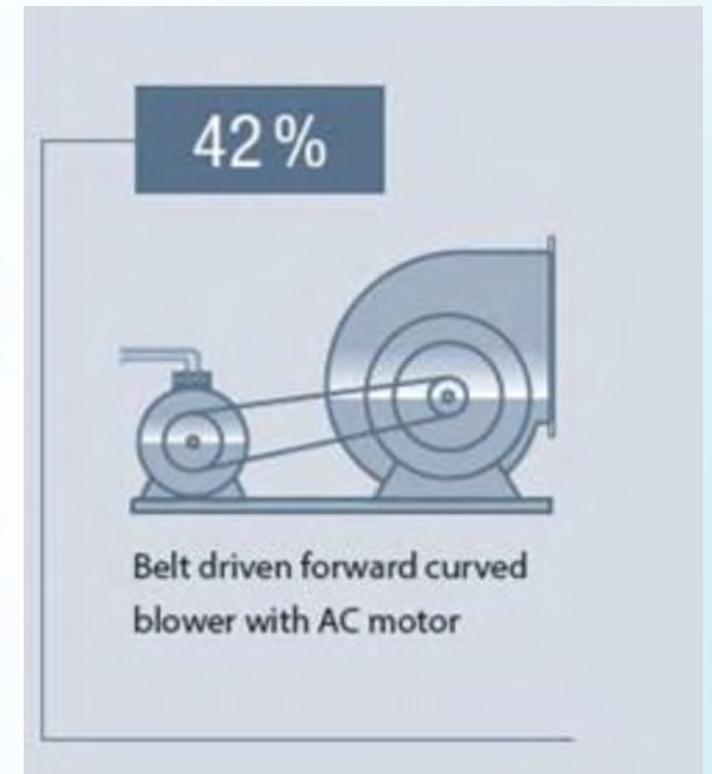

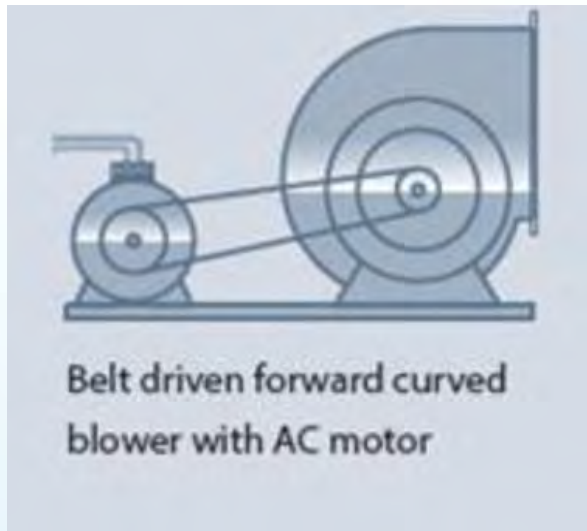

**Mr Nitin Tiwari**  
AGM Sales  
ebm-papst India

# Key topics

- Type of fans
- Energy Efficient EC Fans
- Energy Savings in Buildings

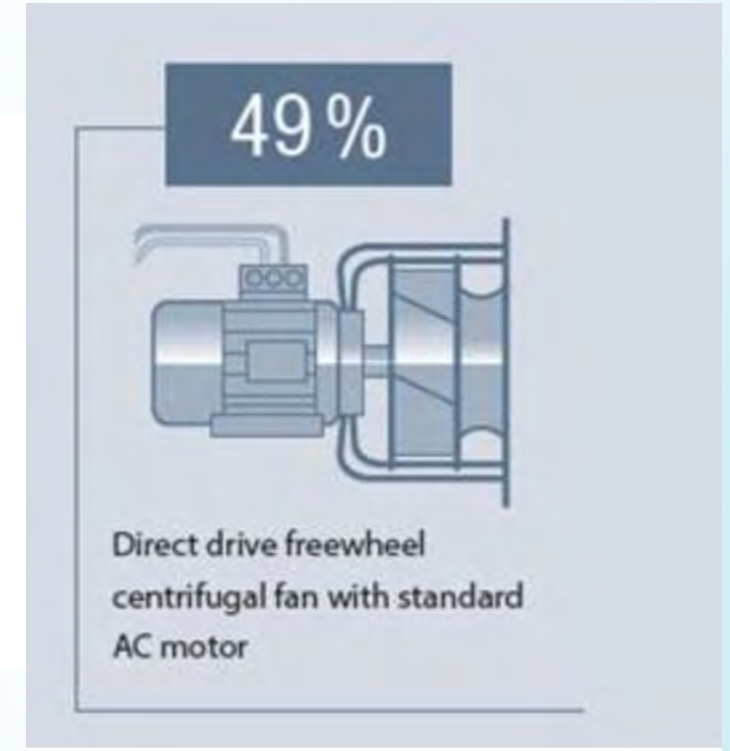

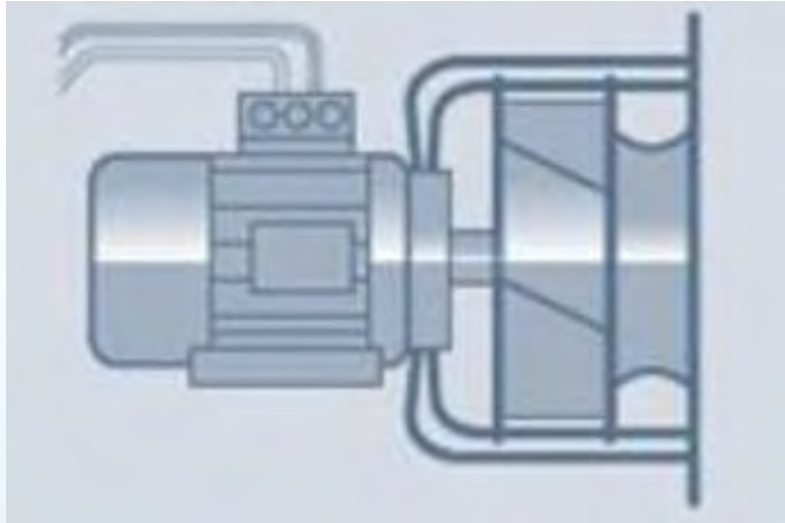

# Type Of Fans

# Belt Driven Fans

- Transmission loss
- Higher maintenance : belt and pulley
- Higher footprint

# Direct Drive Fans

Relatively lower losses  
Still high losses in the air side

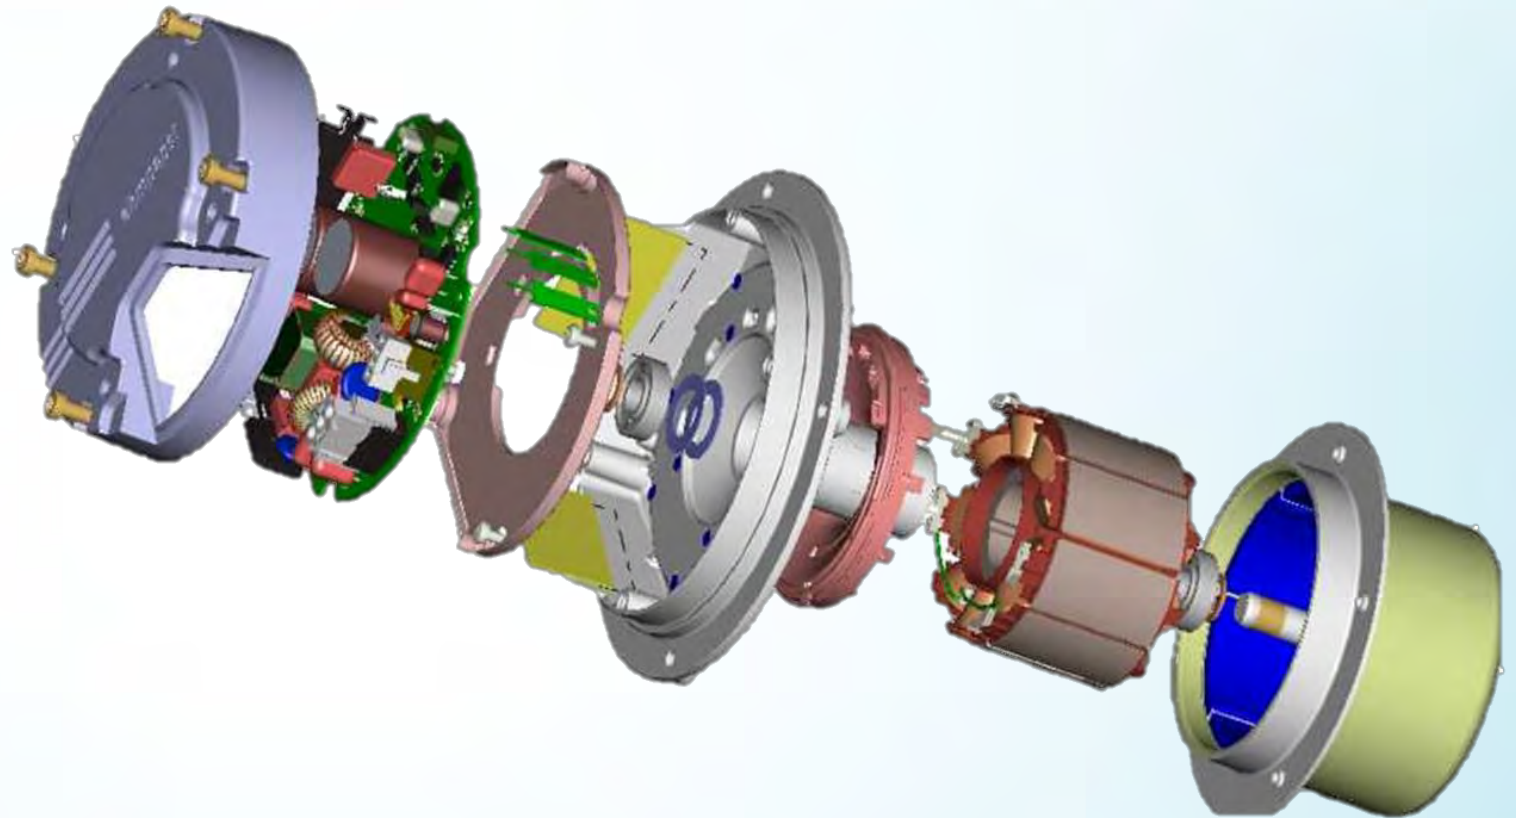

# Energy Efficient EC Fans

# What is EC?

It is a mains-powered,  
**brushless**, permanently excited  
**synchronous motor** with  
“**Electronic Commutation**”

*We simply named it*

## EC motor

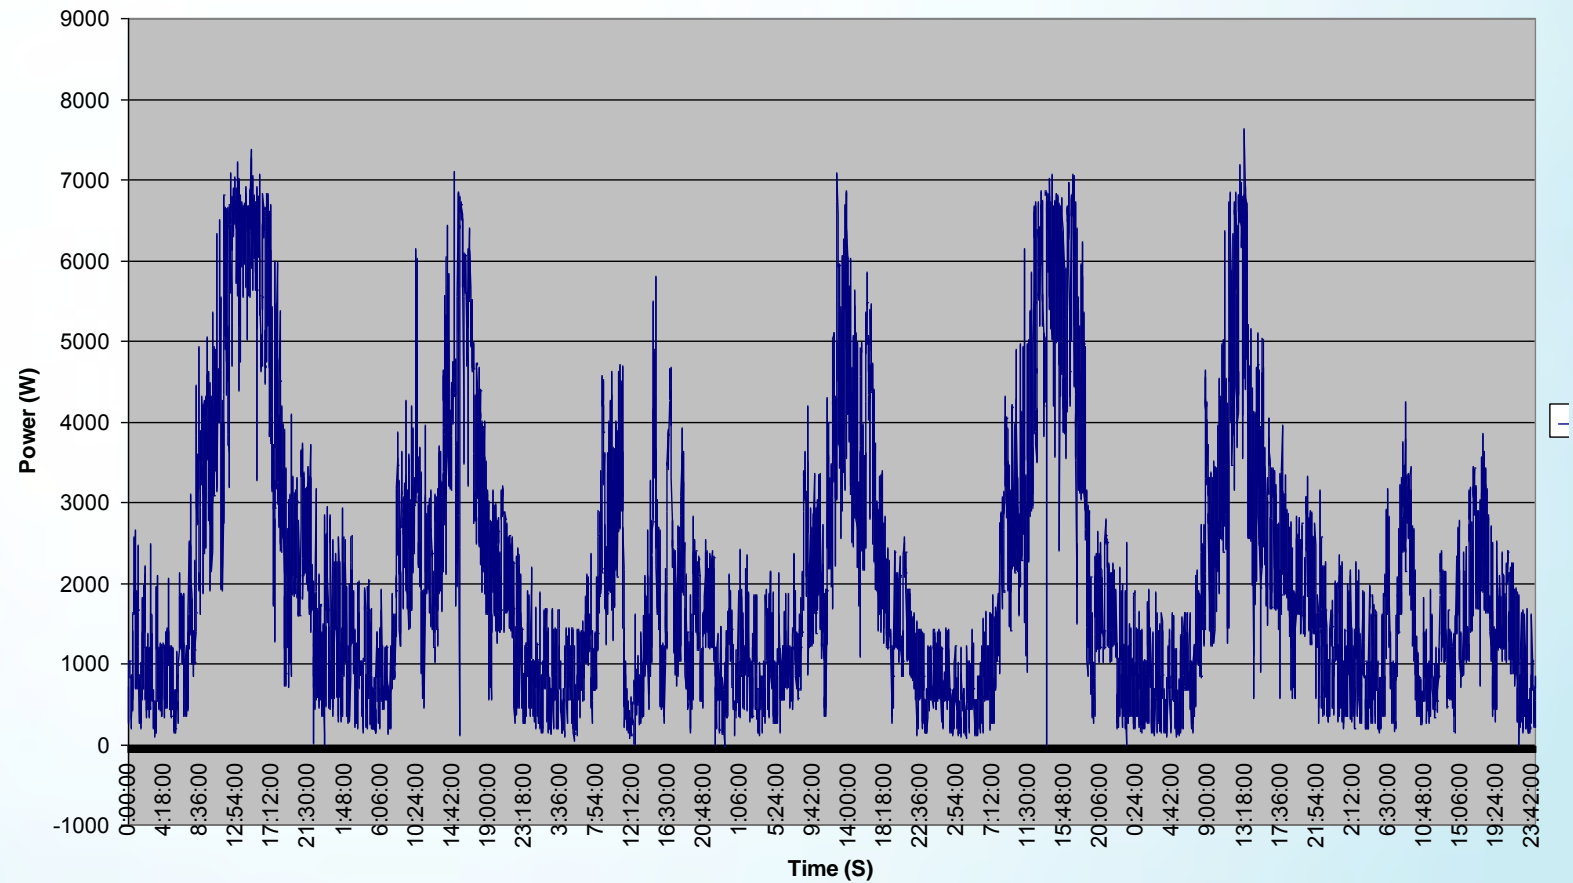

# Why EC?

## Increasing Energy Costs

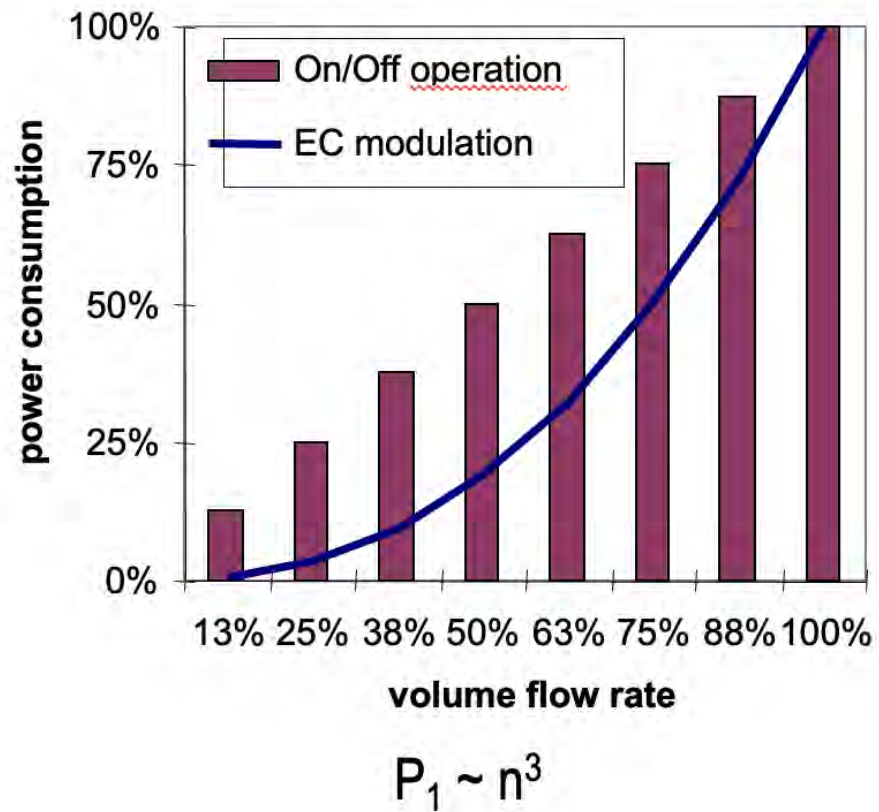

## The load is variable

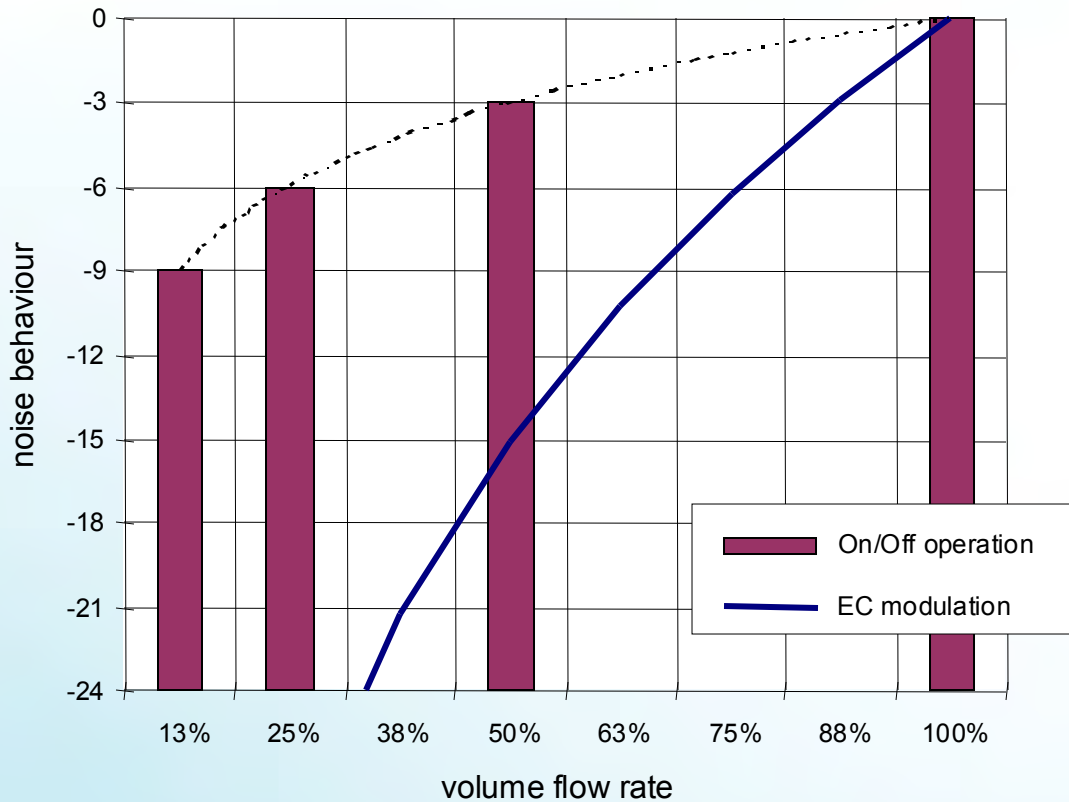

# Why EC?

## Energy Savings In Part Load

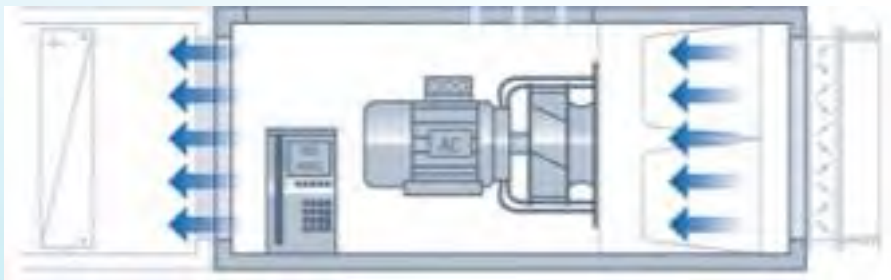

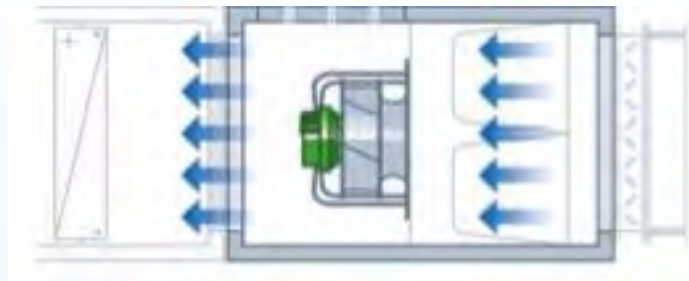

# Why EC?

## Noise Reduction

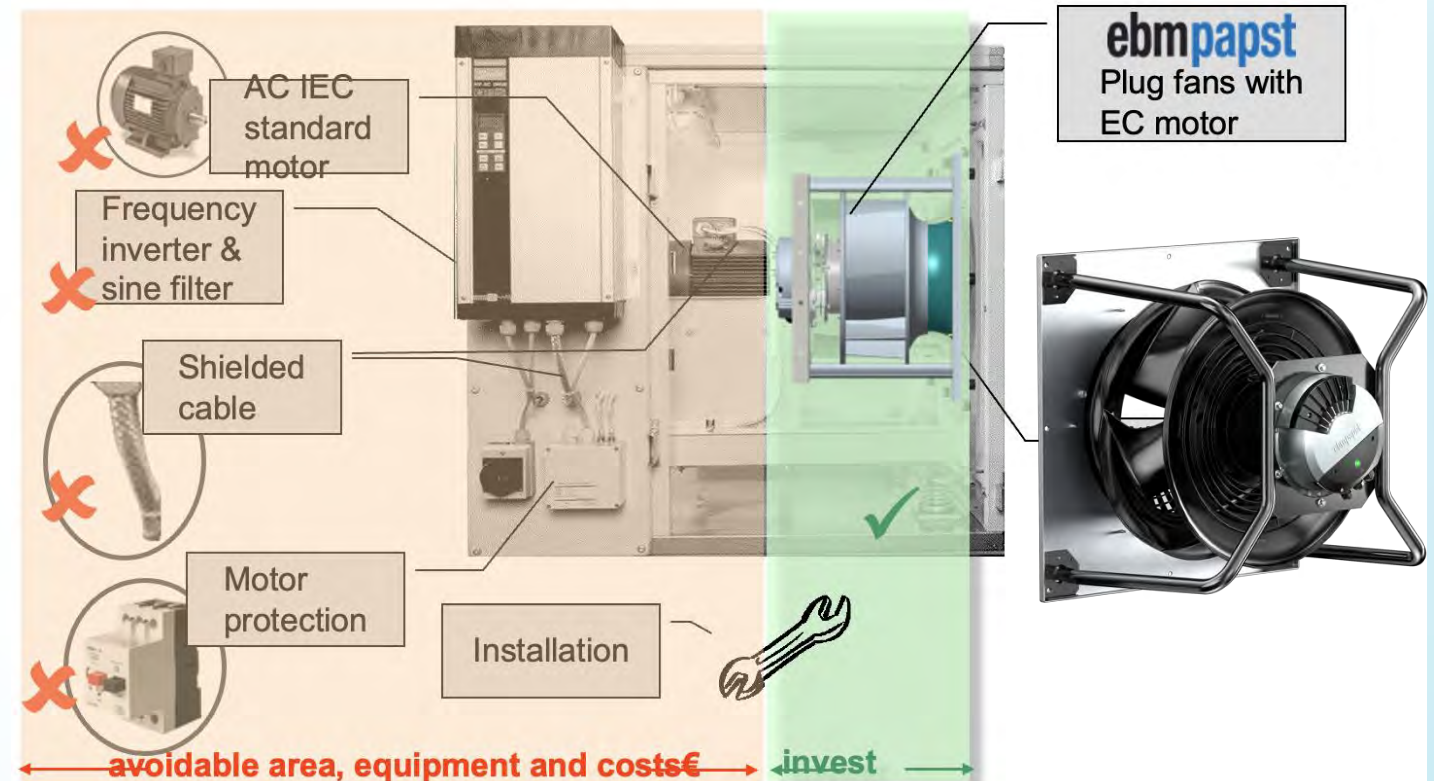

# Why EC?

Compact

Space savings

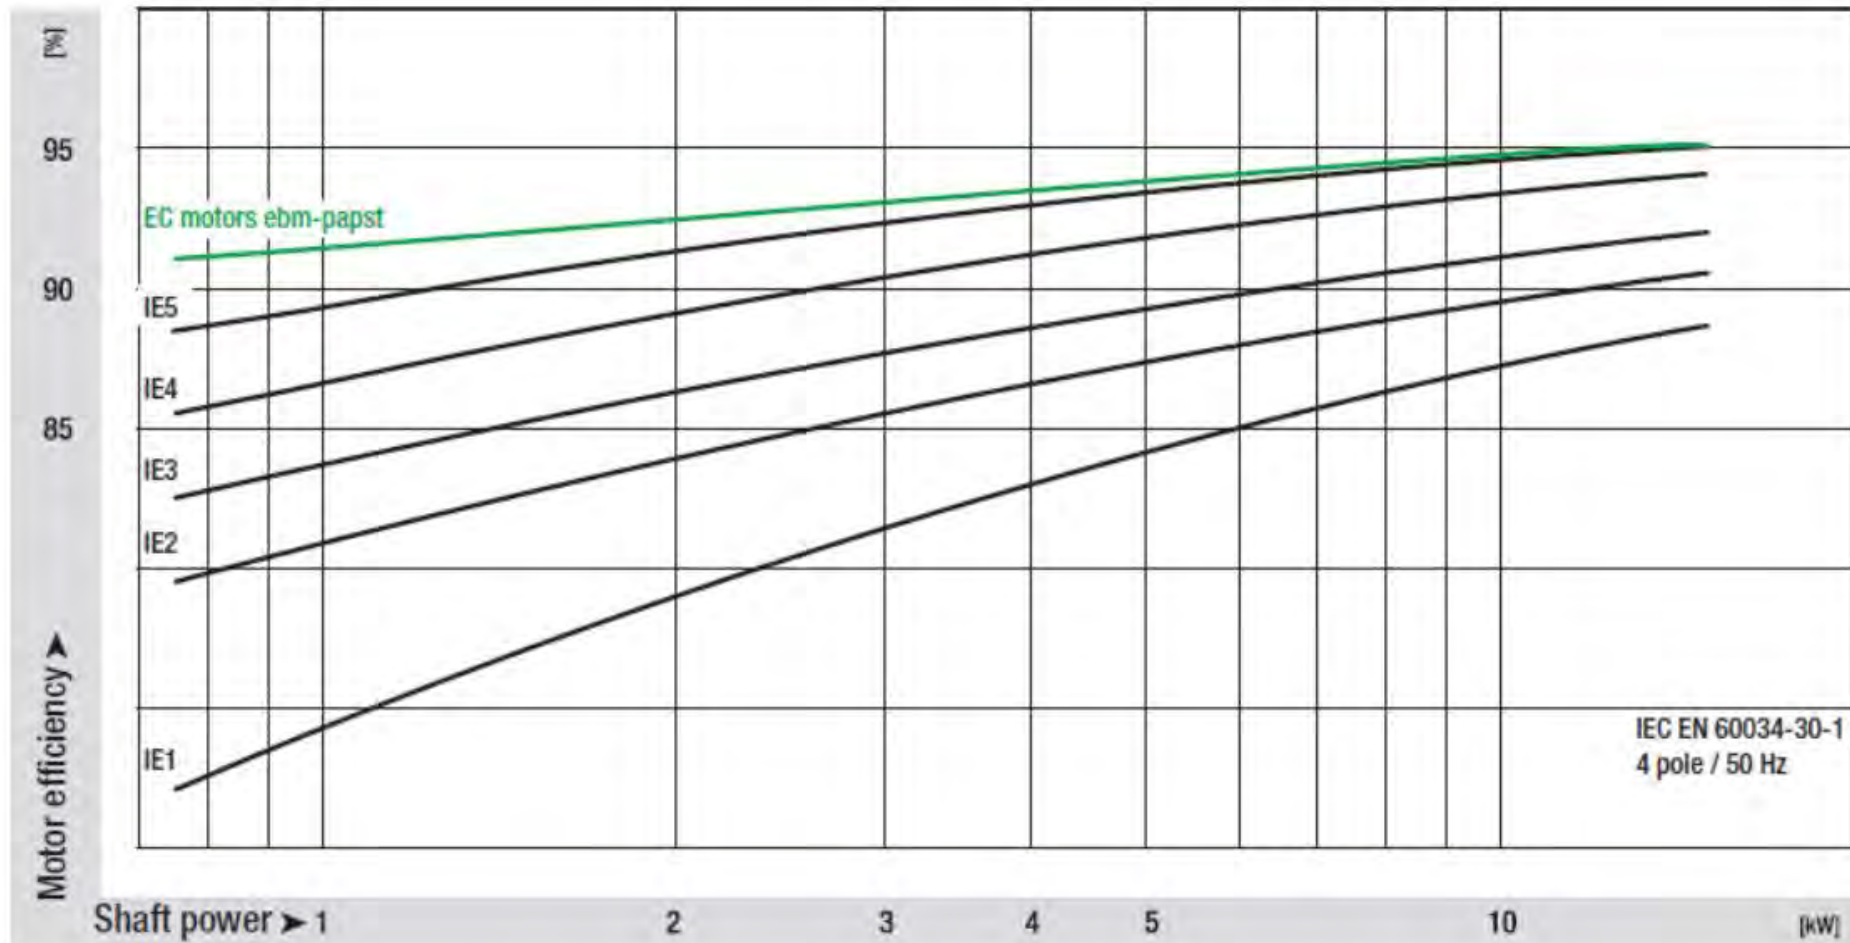

26/09/24

No need of ancillaries like Motor, VFD, Cables, etc

# Why EC?

Efficient EC motors above IE5 limits

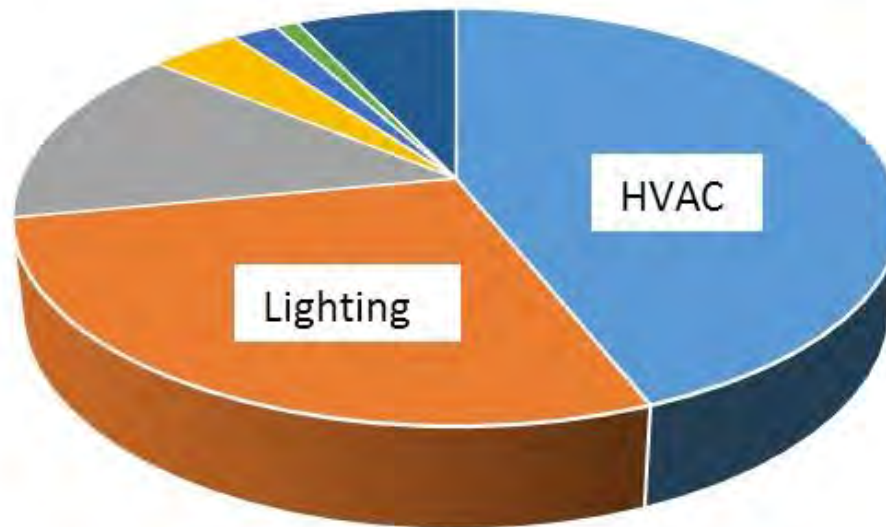

# Energy Savings In Buildings

# Energy Savings In Buildings

44% of a Commercial Building's Energy Consumption is Attributed to HVAC Systems

- HVAC 44%
- Lighting 28%
- Ofc. Equipment 14%
- Water Heat 4%
- Refrigeration 2%
- Cooking 1%
- Other 7%

# Energy Savings In Buildings With EC Technology

**Air Handling Units**

**CRAC/PAC**

**Condensers**

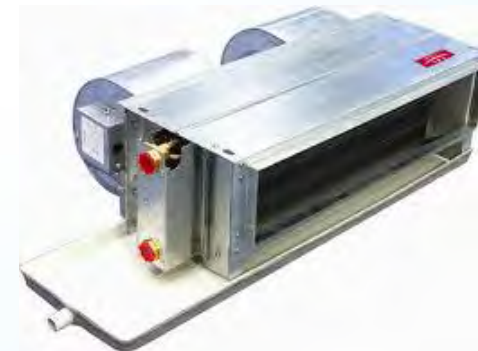

**Fan-Arrays Data Centers**

**Chillers**

**Cooling Towers**

**FCU/CSU**

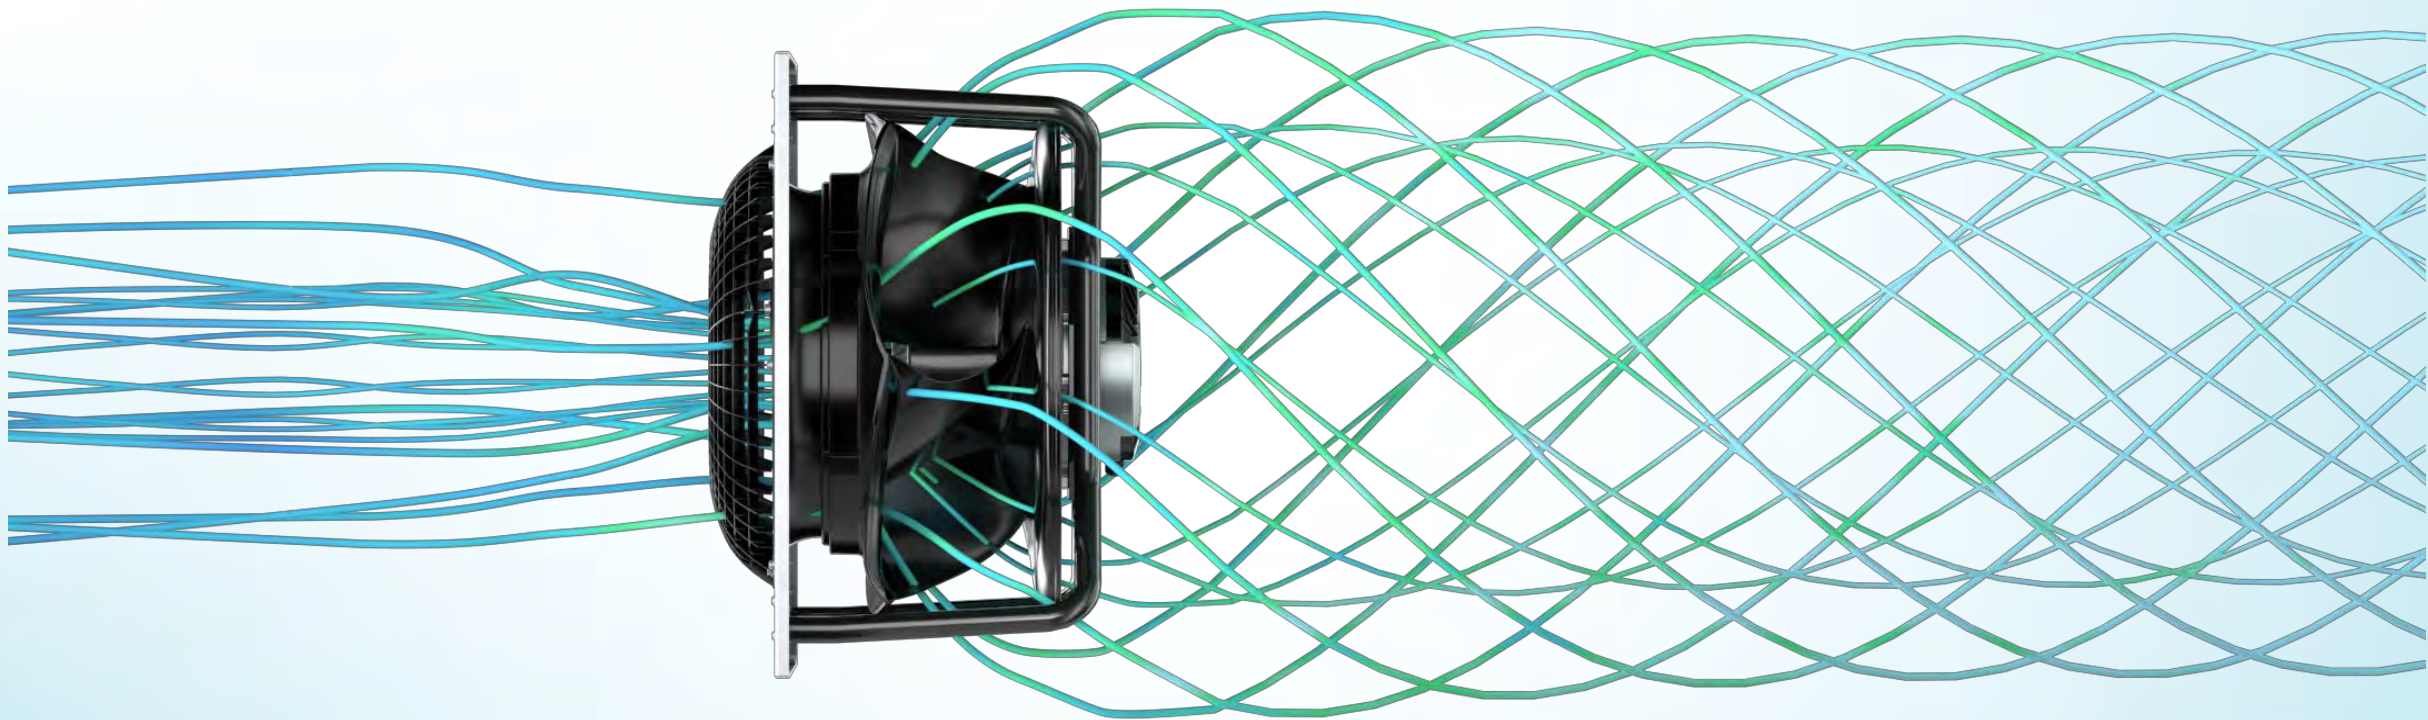

**Exhausts/ Ventilation**

# Evolution of Energy Savings With EC Technology

**Energy consumed for 10,000 CMH at 1000 Pa →→→**

# *Thank You For Your Attention!!*

# Thank You!
